Note 15 - Capital adequacy

New capital adequacy rules were introduced in Norway as from 1 January 2007 (Basel II - the EU's new directive on capital adequacy). SpareBank1 SMN applied to and received permission from Finanstilsynet (Financial Supervisory Authority of Norway) to use internal rating methods (Internal Rating Based Approach - Foundation) to calculate charges for credit risk from 1 January 2007 onwards. This will make the statutory minimum capital adequacy requirement more risk-sensitive, so that it better reflects the risk in the underlying portfolios. Using IRB demands high standards of the Bank's organisation, competence, risk models and risk management systems. Under interim regulations issued by Finanstilsynet, IRB banks are not yet seeing the full effect of the reduced capital requirements. As from 2009, a 20% reduction of the risk-weighted basis of calculation was allowed.

The Norwegian State Finance Fund has in a period to 30 September 2009 offered tier 1 capital to solid Norwegian banks to help them meet tighter capital adequacy requirements and improve their lending capacity. SMN applied for, and was granted, a capital infusion which was disbursed from the State Finance Fund in the form of hybrid equity worth NOK 1.25 billion as of 30.9.09. In March 2010, with Finanstilsynet's approval, this was partially redeemed in an amount of NOK 450 million, and the remainder was repaid in April 2010.

Subordinated debt ranks behind all other liabilities. Dated subordinated loans are eligible at a maximum of 50% of tier 1 capital for capital adequacy purposes, while perpetual subordinated loans are eligible at a maximum of 100% of tier 1 capital. Subordinated loans are classified as a liability in the balance sheet and are measured at amortised cost in the same way as other long-term loans.

Hybrid capital denotes bonds with a nominal interest rate, but the bank is not obliged to pay interest in a period where dividends are not paid, and neither is the investor subsequently entitled to interest that has not been paid, i.e. interest does not accumulate. Hybrid capital is approved as an element of tier 1 capital up to limit of 15% of aggregate tier 1 capital. Finanstilsynet (Norway's FSA) can require hybrid capital to be written down in proportion with equity capital should the bank's tier 1 capital adequacy fall below 5% or total capital adequacy falls below 6%. Written-down amounts on hybrid capital must be written up before dividends can be paid to shareholders or before equity capital is written up. Hybrid capital is shown as other long-term debt at amortised cost.

For detailed information about subordinated debt and hybrid capital, see note 34 in the Bank's annual report.
