Note 1 - Accounting principles

Accounting principles

SpareBank 1 SMN prepares and presents its quarterly accounts in compliance with the Stock Exchange Regulations, Stock Exchange Rules and International Financial Reporting Standards (IFRS) approved by EU, including IAS 34, Interim Financial Reporting. The quarterly accounts do not include all the information required in a complete set of annual financial statements and should be read in conjunction with the annual accounts for 2019. The Group has in this quarterly report used the same accounting principles and calculation methods as in the latest annual report and accounts.

Revised distribution of profit for 2019

The Board of Directors of SpareBank 1 SMN has decided to change its distribution of profit for 2019 based on the economic outlook, reducing the payout ratio from 53.5% to 41.2%. New dividend is NOK 5.00 per equity certificate, down from NOK 6.50 in the annual accounts for 2019. The annual accounts for 2019 were not changed to reflect this. Comparable figures for 2019 has not been restated in the quarterly report, but the effect on the solvency of the changed allocation is shown in note 4

Note 2 - Critical estimates and assessment concerning the use of accounting principles

When it prepares the consolidated accounts the management team makes estimates, discretionary assessments and assumptions which influence the application of accounting principles. This accordingly affects recognised amounts for assets, liabilities, revenues and expenses. Last year's annual accounts give a closer explanation of significant estimates and assumptions in Note 3 Critical estimates and assessments concerning the use of accounting principles.

Pensions

Sparebank1 SMN Group has one pension arrangements; defined contribution plan. For a further description of the pension scheme, see note 25 in the 2019 annual report.

The group's pension liabilities are accounted for under IAS 19R. Estimate variances are therefore directly reflected in equity capital and are presented under other comprehensive income. It was decided to terminate the defined benefit scheme at a board meeting on 21 October 2016. Employees on this scheme transferred to the defined contribution scheme from 1 January 2017, and received a paid-up policy showing rights accumulated under the defined benefit scheme. Paid-up policies are managed by the pension fund, which has been a paid-up pension fund as from 1 January 2017. A framework agreement has been established between SpareBank 1 SMN and the pension fund which covers funding, asset management etc. In view of the responsibility still held by SpareBank 1 SMN, future liabilities will need to be incorporated in the accounts. The board of the pension fund is required to be composed of representatives from the Group and participants in the pension schemes in accordance with the articles of association of the pension fund.

A new calculation of the Group's pension liabilities has been carried out as per 31 March 2020:

Actuarial assumptions	31 Dec 2019	1 January 2019	31 March 2020
Discount rate	2,30 %	2,30 %	1,70 %
Expected rate of return on plan assets	2,30 %	2,30 %	1,70 %

Investment held for sale

SpareBank 1 SMN's strategy is that ownership due to defaulted exposures should at the outset be of brief duration, normally not longer than one year. Investments are recorded at fair value in the Parent Bank's accounts, and is classified as investment held for sale.

2020 Q1 (NOKm)	Assets	Liabilities	Revenue	Expenses	Profit	Ownership
Mavi XV AS Group	40	1	1	1	-	100 %
Total Held for sale	40	1	1	1	-	

Losses on loans and guarantees

For a detailed description of the Bank's model for expected credit losses, refer to note 2 and 3 in the annual accounts for 2019.

In the first quarter 2020 the input in the credit loss model have been changed a result of changed expectations due to the corona situation. The crisis and the significant increase in macroeconomic uncertainty have made the assessments extra demanding. The crisis is in early stages and the consequences for the bank's customers and the industries the bank are exposed to are difficult to estimate. The regulators have emphasized the importance of focusing on the expected long-term effects of the crisis and this has also been the bank's focus.

The bank have chosen to leave the scenario weights unchanged in the assessments this quarter, but have changed the assumptions for the base scenario in a negative direction. The reason is that the probability of the defined downside scenarios occurring is considered to be virtually unchanged, while there is little doubt that the most likely scenario is weaker compared to the previous quarter.

The development in the base scenario is prepared using adjustment factors where the development in the business cycle is projected by assumptions about how much the probability of default (PD) or loss of default (LGD) will increase or decrease compared to the base scenario in a five-year period. We expect increased losses related to debtors that have a demanding starting point before the crisis - typically debtors in stage 2. The bank has therefore chosen to increase the trajectories for PD and LGD as well as reduce expected repayments in the base scenario, especially from year 2 onwards, since this will affect expected losses mainly for debtors in stage 2. To adjust for migration into stage 2, PD and LGD estimates are also increased in the first year. No first year repayments are assumed for all portfolios in all scenarios. The effect of changes in input assumptions is shown as "Effect of changed assumptions in ECL model" in note 7. The effect is NOK 80 million.

Sensitivity

If the downside scenario's probability were doubled at the expense of the baseline scenario at the end of march 2020, this would have entailed an increase in loss provisions of NOK 80 million for the parent bank and NOK 103 million for the group. A corresponding doubling of the upside scenario's probability at the expense of the baseline scenario would have entailed a reduction in loss provisions of NOK 28 million for the parent bank and NOK 30 million for the group.

2020 Q1 (mill. kr)

Portfolio	Increase in accrual for losses when probability for worst case is double	Increase in accrual for losses when probability for worst case is 100 percent	Reduction in accrual for losses when probability for best case is double	Reduction in accrual for losses when probability for best case is 100 percent

Note 4 - Capital adequacy

SpareBank 1 SMN utilises the Internal Rating Based Approach (IRB) for credit risk. Use of IRB imposes wide-ranging requirements on the bank's organisational set-up, competence, risk models and risk management systems. As from 31 March 2015 the bank has received permission to apply the Advanced IRB Approach to those corporate portfolios that were previously reported under the Basic Indicator Approach.

As of 31 March 2020 the capital conservation buffer requirement is 2.5 per cent, the systemic risk requirement is 3.0 per cent and the Norwegian countercyclical buffer is 1.0 per cent. These requirements are additional to the requirement of 4.5 per cent CET1 capital, so that the overall minimum requirement on CET1 capital is 11.0 per cent. In addition the financial supervisory authority has set a Pillar 2 requirement of 1.9 per cent for SpareBank 1 SMN. The total minimum requirement on CET1 capital is accordingly 12.9 per cent.

The Supervisory Board adopted at its meeting on 26 March 2020 a revised proposal for application of the net profit for 2019 entailing an overall reduction of 303 NOK million compared with the original proposal of NOK 1,314 million for distribution as dividends and donations. Historical figures as at 31 December 2019 are not restated, but the effect of the above decision as at 31 December 2019 is shown in the table below.

The EU capital adequacy framework (CRR/CRDIV) was incorporated into Norwegian law with effect from 31 December 2019. The Basel I floor was accordingly removed and an SME rebate introduced. The countercyclical capital buffer was reduced with immediate effect in March 2020 from 2.5 per cent to 1.0 per cent. The systemic risk buffer will rise to 4.5 per cent with effect from 31 December 2020.

The countercyclical buffer is calculated using differentiated rates. For exposures in other countries the countercyclical buffer rate set by the authorities in the country concerned is applied. If that country has not set a rate, the same rate as for exposures in Norway is applied unless the Ministry of Finance sets another rate. For the first quarter of 2020 both the parent bank and the group is below the capital deduction threshold such that the Norwegian rate is applied to all relevant exposures.

The group's hybrid equity and subordinated debt issued under the old rules has now either been redeemed or notice of redemption has been given such that as of the first quarter of 2020 the group has no holdings covered by the transitional provisions.

Note 15 - Measurement of fair value of financial instruments

Financial instruments at fair value are classified at various levels.

Level 1: Valuation based on quoted prices in an active market

Fair value of financial instruments that are traded in the active markets is based on market price on the balance sheet date. A market is considered active if market prices are easily and regularly available from a stock exchange, dealer, broker, industry group, price-setting service or regulatory authority, and these prices represent actual and regularly occurring market transactions at an arm's length. This category also includes quoted shares and Treasury bills.

Level 2: Valuation based on observable market data

Level 2 consists of instruments that are valued by the use of information that does not consist in quoted prices, but where the prices are directly or indirectly observable for the assets or liabilities concerned, and which also include quoted prices in non-active markets.

Level 3: Valuation based on other than observable data

If valuation data are not available for level 1 and 2, valuation methods are applied that are based on non-observable information.

The following table presents the Group's assets and liabilities measured at fair value at 31 March 2020:

Assets (NOKm)	Level 1	Level 2	Level 3	Total
Financial assets at fair value through profit/loss				
- Derivatives	2	11,755	-	11,757

Gain or loss on financial instruments	87	-25	6	68
Closing balance	405	4,636	71,336	76,377

Valuation method

The valuation method applied is adapted to each financial instrument, and is intended to utilise as much of the information that is available in the market as possible.

The method for valuation of financial instruments in level 2 and 3 is described in the following:

Fixed interest loans to customers (level 3)

The loans consist for the most part of fixed interest loans denominated in Norwegian kroner. The value of the fixed interest loans is determined such that agreed interest flows are discounted over the term of the loan by a discount factor that is adjusted for margin requirements. The discount factor is raised by 10 points when calculating sensitivity.

Loans at fair value through other comprehensive income (level 3)

Floating rate mortgages classified at fair value through other comprehensive income (OCI) are valued based on carrying amounts and expected credit losses. Mortgages without significant increase in credit risk since initial recognition, are valued at nominal amount. For loans with a significant increase in credit risk since initial recognition, expected credit loss will be calculated as for assets at amortised cost. Estimated fair value on these mortgages are the carrying amount less lifetime expected credit losses. With a double likelihood of the worst case scenario in the expected credit loss model, the calculated fair value is reduced by NOK 7 million.

Short-term paper and bonds (level 2 and 3)

Valuation on level 2 is based for the most part on observable market information in the form of interest rate curves, exchange rates and credit margins for the individual credit and the bond's or certificate's characteristics. For paper valued under level 3 the valuation is based on indicative prices from a third party or comparable paper.

Equity instruments (level 3)

Shares that are classified to level 3 include essentially investments in unquoted shares. Among other a total of NOK 279 million in Private Equity investments, property funds, hedge funds and unquoted shares through the company SpareBank 1 SMN Invest AS. The valuations are in all essentials based on reporting from managers of the funds who utilise cash flow based models or multiples when determining fair value. The Group does not have full access to information on all the elements in these valuations and is therefore unable to determine alternative assumptions.

Financial derivatives (level 2)

Financial derivatives at level 2 include for the most part currency futures and interest rate and exchange rate swaps. Valuation is based on observable interest rate curves. In addition the item includes derivatives related to FRAs. These are valued with a basis in observable prices in the market. Derivatives classified to level 2 also include equity derivatives related to SpareBank 1 Markets' market-making activities. The bulk of these derivatives refer to the most sold shares on Oslo Børs, and the valuation is based on the price of the actual/underlying share and observable or calculated volatility.

Sensitivity analyses, level 3 as at 31 March 2020:

(NOKm)	Book value	Effect from change in reasonable possible alternative assumptions
Fixed interest loans	4,396	-1
Equity instruments through profit/loss*	406	-
Loans at fair value through other comprehensive income	71,584	-7

* As described above, the information to perform alternative calculations are not available

Note 16 - Liquidity risk

Liquidity risk is the risk that the group will be unable to refinance its debt or to finance asset increases. Liquidity risk management starts out from the group's overall liquidity strategy which is reviewed and adopted by the board of directors at least once each year. The liquidity strategy reflects the group's moderate risk profile.

The group mitigates liquidity risk by diversifying its funding across different markets, funding sources, maturities and instruments and through the use of long-term funding. Contingency plans exist both for the group and the SpareBank 1 alliance for managing the liquidity situation in periods of capital market turbulence. These plans address both bank-specific and systemic crises and a combination of the two. The group's objective is to survive twelve months of ordinary operations without access to fresh external funding while housing prices fall 30 per cent. In the same period minimum requirements to LCR shall be fulfilled.

The average residual maturity on the portfolio of senior bonds and covered bonds at the end of the first quarter 2020 was 3.4 years. The overall LCR at the same point was 185 per cent and the average overall LCR in the first quarter was 175 per cent. The LCR in Norwegian kroner at quarter-end was 137 per cent. In euro there was a net cash inflow.

Note 17 - Earnings per EC

ECC owners share of profit have been calculated based on net profit allocated in accordance to the average number of certificates outstanding in the period. There is no option agreements in relation to the Equity Capital certificates, diluted net profit is therefore equivalent to Net profit per ECC.

(NOKm)	Jan-March
