New regulatory definition of default increases stage 3 loans from 2021

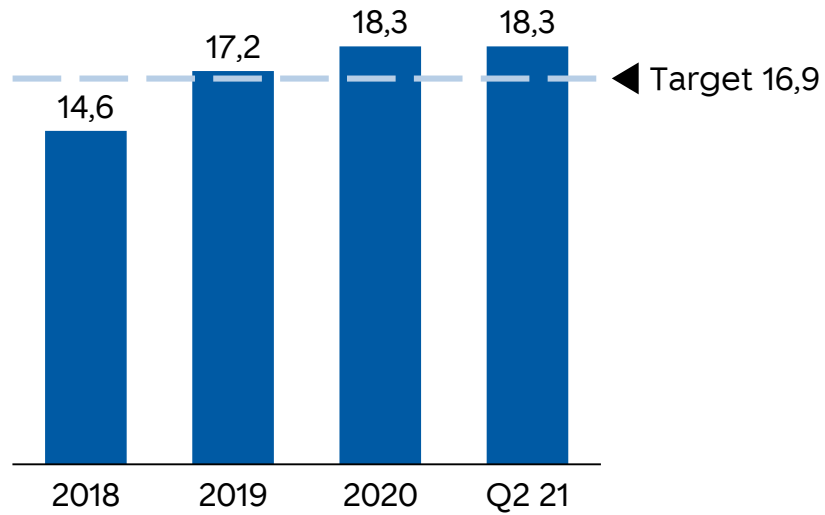

The new definition has not changed the groups assessment of its credit risk exposure, hence it has no material effect on losses in 2021

The increase in potential problem loans this year is due to exposures that previously exited non-performing status, but is classified as on probation according to the new regulatory definition of default

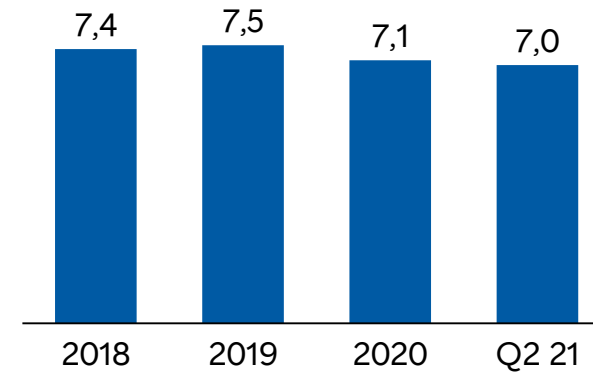

The change in Q2 is mostly related to exposures that have been restructured and are on probation as of 30. June 2021.
