Note 1 - Accounting principles

Accounting principles

SpareBank 1 SMN prepares and presents its quarterly accounts in compliance with the Stock Exchange Regulations, Stock Exchange Rules and International Financial Reporting Standards (IFRS) approved by EU, including IAS 34, Interim Financial Reporting. The quarterly accounts do not include all the information required in a complete set of annual financial statements and should be read in conjunction with the annual accounts for 2020. The Group has in this quarterly report used the same accounting principles and calculation methods as in the latest annual report and accounts with the exception noted below.

Definition of default

The group implemented a new definition of default on 1 January 2021.

The new definition is formulated in accordance with the European Banking Authority's guidelines on how banks should apply the definition of default in the Capital Requirements Regulation (CRR) and clarifications in the Norwegian CRR/CRD IV regulations.

Default is defined in two categories: 1) payment default or 2) default based on manual default marking.

- 1) Payment default is defined as material payment arrears or overdrafts of more than 90 days' duration. Threshold values for material arrears or overdrafts are set out in the Norwegian CRR/CRD IV regulations.
- 2) Default resulting from manual default marking is based to a larger degree on individual credit assessments, and to a lesser degree on automatic mechanisms. Events included in this category are provision for loss on a customer loan, bankruptcy/debt restructuring, forbearance assessments, deferment of interest and instalment payments for more than 180 days, or other indications suggesting considerable doubt as to whether the borrower will perform his obligations.

The new default definition entails the introduction of a 'waiting period' during which borrowers are categorised as still in default after the default has been rectified. The waiting period is three months or 12 months depending on the underlying cause of the default.

Furthermore, rules on default marking at group level are introduced whereby corporate customers in default to a group company (e.g. SpareBank 1 SMN Finans Midt-Norge) will also be considered to be in default to the bank. For personal customers, threshold values are specified for default contagion in the group. Where a defaulted exposure exceeds 20% of total exposure, the exposure will be considered to be in default at group level.

The group has with effect from 1 January 2021 also applied the new default definition for accounting purposes for transfer of loans to stage 3. As at 31 March 2021 this entailed an increase of NOK 818m in loan volume in stage 3, primarily as a result of the new definition. However, there was no significant change in the underlying credit risk over the course of the first quarter of 2021. Comparatives have not been restated.

Note 2 - Critical estimates and assessment concerning the use of accounting principles

When it prepares the consolidated accounts the management team makes estimates, discretionary assessments and assumptions which influence the application of accounting principles. This accordingly affects recognised amounts for assets, liabilities, revenues and expenses. Last year's annual accounts give a closer explanation of significant estimates and assumptions in Note 3 Critical estimates and assessments concerning the use of accounting principles.

Pensions

Sparebank1 SMN Group has one pension arrangement; defined contribution plan. For a further description of the pension scheme, see note 25 in the 2020 annual report.

The group's pension liabilities are accounted for under IAS 19R. Estimate variances are therefore directly reflected in equity capital and are presented under other comprehensive income. It was decided to terminate the defined benefit scheme at a board meeting on 21 October 2016. Employees on this scheme transferred to the defined contribution scheme from 1 January 2017, and received a paid-up policy showing rights accumulated under the defined benefit scheme. Paid-up policies are managed by the pension fund, which has been a paid-up pension fund as from 1 January 2017. A framework agreement has been established between SpareBank 1 SMN and the pension fund which covers funding, asset management etc. In view of the responsibility still held by SpareBank 1 SMN, future liabilities will need to be incorporated in the accounts. The board of the pension fund is required to be composed of representatives from the Group and participants in the pension schemes in accordance with the articles of association of the pension fund.

A new calculation of the Group's pension liabilities has not been carried out as per 31 March 2021.

Investment held for sale

SpareBank 1 SMN's strategy is that ownership duse to defaulted exposures should at the outset be of brief duration, normally not longer than one year. Investments are recorded at fair value in the Parent Bank's accounts, and is classified as investment held for sale.

2021 Q1 (NOKm)	Assets	Liabilities	Revenue	Expenses	Profit	Ownership
Mavi XV AS Group	40	0	1	1	=	100 %
Total Held for sale	40	0	1	1	-	

Losses on loans and guarantees

For a detailed description of the Bank's model for expected credit losses, refer to note 2 and 3 in the annual accounts for 2020.

In the first quarter 2020 some changes were made in the input in the credit loss model as a result of changed expectations due to the corona situation. The crisis and the significant increase in macroeconomic uncertainty have made the assessments extra demanding. We are in the early stages of the crisis and the consequences for the bank's customers and the industries we are exposed to are difficult to estimate. The regulators have emphasized the importance of focusing on the expected long-term effects of the crisis and this has also been the bank's focus.

In the first quarter 2020 the bank changed the assumptions for the base scenario in a negative direction. This has been continued for the rest of 2020 and in the first quarter of 2021. The bank's exposure to hotels and tourism, including commercial real estate with the income mainly towards this industry, is separated into a separate portfolio with its own assessments of PD and LGD courses as well as special scenarios and weighting of these to reflect this portfolio's exposure to the effects of corona. In addition, this entire portfolio is included in stage 2 or 3.

The development in the base scenario is prepared using adjustment factors where the development in the business cycle is projected by assumptions about how much the probability of default (PD) or loss of default (LGD) will increase or decrease compared to the base scenario in a five-year period. We expect increased losses related to debtors that have a demanding starting point before the crisis - typically debtors in stage 2. We have therefore chosen to increase the trajectories for PD and LGD as well as reduce expected repayments in the base scenario, especially from year 2 onwards, since this will affect expected losses mainly for debtors in stage 2. To adjust for migration into stage 2, PD and LGD estimates are also increased in the first year. No first year repayments are assumed for all portfolios in the downside scenario.

The applied scenario weighting was changed in the fourth quarter of 2020 to reflect further increased uncertainty. For corporate market including offshore, as well as agriculture, the downside scenario was changed from a weighting with a 10 percent probability, to a

weighting of a 20 percent probability. For retail market, the weighting of the downside scenario was changed from 10 to 15 per cent. This has been continued in first quarter 2021.

The effect of changes in input assumptions is shown as "Effect of changed assumptions in ECL model" in note 7. The effect is NOK 11 million for the Bank and 5 million for the Group.

Sensitivities

The first part of the table below show total calculated expected credit loss as of 31 March 2021 in each of the three scenarios, distributed in the portfolios retail market (RM) corporate market (CM), and offshore, travel and agriculture which adds up to parent bank. In addition the subsidiary SB 1 Finans Midt-norge is included. ECL for the parent bank and the subsidiary is summed up in th coloumn "Group"

The second part of the table show the ECL distributed by portfolio using the scenario weight applied, in addition to a alternative weighting where worst case have been doubled.

If the downside scenario's probability were doubled at the expense of the baseline scenario at the end of March 2021, this would have entailed an increase in loss provisions of NOK 284 million for the parent bank and NOK 291 million for the group.

	CM (excl offshore and	RM	Offshore	Agriculture	Tourism	Total parent	SB 1 Finans MN	Group
ECL base case	346		836	26	47	1,346	63	1,408

ECL with scenario weights used 80/10/10	-	-	-	-	-	-	68	69
ECL with scenario weights used 65/25/15	509	-	867	36	-	1,412	-	1,412
ECL with scenario weights used 60/30/10	-	-	-	-	57	57	-	57
ECL with scenario weights used 70/15/15	-	118	-	-	-	118	-	118
Total ECL used	509	118	867	36	57	1,554	68	1,656
	-	-	-	-	-	-	-	-
ECL alternative scenario weights 70/20/10	-	-	-	-	-	-	75	76
ECL alternative scenario weights 45/40/15	683	-	917	49	-	1,649	-	1,649
ECL alternative scenario weights 30/60/10	-	-	-	-	71	71	-	71
ECL alternative scenario weights 55/30/15	-	151	-	-	-	151	-	151
Total ECL alternative weights	683	151	917	49	71	1,871	75	1,946
Change in ECL if alternative weights were used	174	33	50	13	14	284	7	291

The Tourism portfolio includes commercial real estate with more than 50% of the income from actors in hotels and tourism companies.

The table reflects that there are some significant differences in underlying PD and LGD estimates in the different scenarios and that there are differentiated levels and level differences between the portfolios. At group level, the ECL in the upside scenario, which largely reflects the loss and default picture in recent years, is about 80 per cent of the ECL in the expected scenario. The downside scenario gives about double the ECL than in the expected scenario. Applied scenario weighting gives about 18 percent higher ECL than in the expected scenario

Note 3 - Account by business line

For the subsidiaries the figures refer to the respective company accounts, while for joint ventures incorporated by the equity method the Group's profit share is stated, after tax, as well as book value of the investment at group level.

Note 4 - Capital adequacy

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD IV). SpareBank 1 SMN utilises the Internal Rating Based Approach (IRB) for credit risk. Advanced IRB Approach is used for the corporate portfolios. Use of IRB imposes wide-ranging requirements on the bank's organisational set-up, competence, risk models and risk management systems.

As of 31 March 2021 the overall minimum requirement on CET1 capital is 12.5 per cent. The capital conservation buffer requirement is 2.5 per cent, the systemic risk requirement for Norwegian IRB-banks is 4.5 per cent and the Norwegian countercyclical buffer is 1.0 per cent. These requirements are additional to the requirement of 4.5 per cent CET1 capital. In addition the financial supervisory authority has set a Pillar 2 requirement of 1.9 per cent for SpareBank 1 SMN, however not below NOK 1,794 million in monetary terms.

The systemic risk buffer stands at 4.5 per cent for the Norwegian exposures. For exposures in other countries, the particular country's systemic buffer rate shall be employed. As of 31 March 2021 the effective rate for the parent bank and for the group is accordingly 4.4 per cent.

The countercyclical buffer is calculated using differentiated rates. For exposures in other countries the countercyclical buffer rate set by the authorities in the country concerned is applied. If that country has not set a rate, the same rate as for exposures in Norway is applied unless the Ministry of Finance sets another rate. For the first quarter of 2021 both the parent bank and the group is below the capital deduction threshold such that the Norwegian rate is applied to all relevant exposures.

Note 17 - Measurement of fair value of financial instruments

Financial instruments at fair value are classified at various levels.

Level 1: Valuation based on quoted prices in an active market

Fair value of financial instruments that are traded in the active markets is based on market price on the balance sheet date. A market is considered active if market prices are easily and regularly available from a stock exchange, dealer, broker, industry group, price-setting service or regulatory authority, and these prices represent actual and regularly occurring market transactions at an arm's length. This category also includes quoted shares and Treasury bills.

Level 2: Valuation based on observable market data

Level 2 consists of instruments that are valued by the use of information that does not consist in quoted prices, but where the prices are directly or indirectly observable for the assets or liabilities concerned, and which also include quoted prices in non-active markets.

Level 3: Valuation based on other than observable data

If valuation data are not available for level 1 and 2, valuation methods are applied that are based on non-observable information.

The following table presents the Group's assets and liabilities measured at fair value at 31 March 2021:

Assets (NOKm)	Level 1	Level 2	Level 3	Total
Financial assets at fair value through profit/loss

Gain or loss on financial instruments	-7	81	7	81
Closing balance	432	4,242	74,761	79,435

Valuation method

The valuation method applied is adapted to each financial instrument, and is intended to utilise as much of the information that is available in the market as possible.

The method for valuation of financial instruments in level 2 and 3 is described in the following:

Fixed interest loans to customers (level 3)

The loans consist for the most part of fixed interest loans denominated in Norwegian kroner. The value of the fixed interest loans is determined such that agreed interest flows are discounted over the term of the loan by a discount factor that is adjusted for margin requirements. The discount factor is raised by 10 points when calculating sensitivity.

Loans at fair value through other comprehensive income (level 3)

Floating rate mortgages classified at fair value through other comprehensive income (OCI) are valued based on carrying amounts and expected credit losses. Mortgages without significant increase in credit risk since initial recognition, are valued at nominal amount. For loans with a significant increase in credit risk since initial recognition, expected credit loss will be calculated as for assets at amortised cost. Estimated fair value on these mortgages are the carrying amount less lifetime expected credit losses. With a doble likelihood of the worst case scenario in the expected credit loss model, the calculated fair value is reduced by NOK 7 million.

Short-term paper and bonds (level 2 and 3)

Valuation on level 2 is based for the most part on observable market information in the form of interest rate curves, exchange rates and credit margins for the individual credit and the bond's or certificate's characteristics. For paper valued under level 3 the valuation is based on indicative prices from a third party or comparable paper.

Equity instruments (level 3)

Shares that are classified to level 3 include essentially investments in unquoted shares. Among other a total of NOK 291 million in Private Equity investments, property funds, hedge funds and unquoted shares through the company SpareBank 1 SMN Invest AS. The valuations are in all essentials based on reporting from managers of the funds who utilise cash flow based models or multiples when determining fair value. The Group does not have full access to information on all the elements in these valuations and is therefore unable to determine alternative assumptions.

Financial derivatives (level 2)

Financial derivatives at level 2 include for the most part currency futures and interest rate and exchange rate swaps. Valuation is based on observable interest rate curves. In addition the item includes derivatives related to FRAs. These are valued with a basis in observable prices in the market. Derivatives classified to level 2 also include equity derivatives related to SpareBank 1 Markets' market-making activities. The bulk of these derivatives refer to the most sold shares on Oslo Børs, and the valuation is based on the price of the actual/underlying share and observable or calculated volatility.

Sensitivity analyses, level 3 as at 31 March 2021:

		change in reasonable possible alternative
(NOKm)	Book value	assumtions
Fixed interest loans	4,298	-12
Equity instruments through profit/loss*	510	-
Loans at fair value through other comprehensive income	76,297	-7

^{*} As described above, the information to perform alternative calculations are not available

Effect from

Note 18 - Liquidity risk

Liquidity risk is the risk that the group will be unable to refinance its debt or to finance asset increases. Liquidity risk management starts out from the group's overall liquidity strategy which is reviewed and adopted by the board of directors at least once each year. The liquidity strategy reflects the group's moderate risk profile.

The group reduces its liquidity risk through guidelines and limits designed to achieve a diversified balance sheet, both on the asset and liability side. Preparedness plans have been drawn up both for the group and the SpareBank 1 Alliance to handle the liquidity situation in periods of turbulent capital markets. The bank's liquidity situation is stress tested on a monthly basis using various maturities and crisis scenarios: bank-specific, for the financial market in general or a combination of internal and external factors. The group's objective is to survive twelve months of ordinary operations without access to fresh external funding while housing prices fall 30 per cent. In the same period minimum requirements to LCR shall be fulfilled.

The average residual maturity on debt created by issue of securities at the end of the first quarter 2021 was 3.8 years. The overall LCR at the same point was 190 per cent and the average overall LCR in the first quarter was 188 per cent. The LCR in Norwegian kroner and euro at quarter-end was 188 and 173 per cent respectively.

Note 19 - Earnings per EC

ECC owners share of profit have been calculated based on net profit allocated in accordance to the average number of certificates outstanding in the period. There is no option agreements in relation to the Equity Capital certificates, diluted net profit is therefore equivalent to Net profit per ECC.
